<b>Vocabulary</b>	Question, answer, observe, same, different, measure, test, record, plan	Observing, equipment, identify, predict, sort, group, compare, differences, similarities, describe, pattern, measurements, test, fair, results, record, diagram, chart	Explanation, conclusion, prediction, criteria, classify, changes, data, contrast, evidence, improve Secondary sources, guides, keys, construct, interpret, identify, classify Research- relevant question Comparative and fair test, pattern seeking, observation over time Equipment, Standard units, record, datalogger, Drawings, labelled diagram, keys, bar charts, tables	Variables, accuracy, precision, repeat readings, predictions Systematic patterns, quantitative measurements, Scientific diagrams, classification keys, scatter graphs, line graph Conclusions, casual relationships Explanations, degree of trust Evidence, support refute, Biology, physics, chemistry
<b>1 Asking Questions</b>  <b>recognising that they can be answered in different ways</b> What do you want to find out? How can you answer your question? What sort of enquiry should you use? What will you observe? What will you measure? What will you need? What will you use? How will you record it?	<ul style="list-style-type: none"> <li>Children are encouraged to be curious about the world around them through a hands-on approach to learning.</li> <li>Following exploration they are encouraged to suggest ideas and try them out.</li> </ul>	<b>Ask simple questions and recognise that they can be answered in different ways</b> <ul style="list-style-type: none"> <li>While exploring the world the children develop their ability to ask questions (e.g. What something is, how things are similar or different, how things change and how they happen)</li> <li>The children answer questions developed with the teacher through a planned context or experience. e.g. a story, hands-on exploration</li> <li>Children are involved in planning how to use resources provided to answer questions and begin to use and recognise there are different types of enquiry, to help answer them, including: observing over time, noticing patterns, grouping and classifying things, simple comparative tests finding things out using secondary sources of information</li> <li>They are encouraged to think about what might happen based on their prior knowledge.</li> </ul>	<b>Ask relevant questions and using different types of scientific enquiries to answer them</b> <ul style="list-style-type: none"> <li>They consider their prior knowledge when asking questions about the world around them.</li> <li>They independently use a range of question stems</li> <li>The children answer questions posed by themselves and the teacher.</li> <li>Given a range of resources they decide for themselves how to gather evidence to answer the question.</li> <li>They identify the type of enquiry that they have chosen to answer their question (see KS1)</li> </ul>	<b>Planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary</b> <ul style="list-style-type: none"> <li>Children independently ask scientific questions. This may be stimulated by a scientific experience or involve asking further questions based on their developed understanding following an enquiry.</li> <li>Given a wide range of resources they decide for themselves how to gather evidence to answer a scientific question.</li> <li>They choose a type of enquiry to carry out and justify their choice.</li> </ul>

## Working Scientifically

Strand	EYFS	End of KS1 (Y2)	Mid KS2 (Y4)	End of KS2 (Y6)
<b>2 Secondary sources</b>	They begin to recognise that some answers can be found in photos, diagrams and labels in secondary sources.	<ul style="list-style-type: none"> <li>They use simple secondary sources to find answers to their questions, looking at the pictures, photographs, labels, text for information, information sheets to name living things</li> </ul>	<ul style="list-style-type: none"> <li>They begin to recognise when secondary sources can be used to answer questions that cannot be answered through practical work.</li> </ul>	<p><b>Identifying scientific evidence that has been used to support or refute ideas or arguments</b></p> <ul style="list-style-type: none"> <li>They recognise how secondary sources can be used to answer questions that cannot be answered through practical work.</li> <li>They recognise which secondary sources will be most useful to research their ideas and begin to separate fact from fiction</li> <li>They talk about how scientific ideas have developed over time</li> </ul>
<b>3 Observations and measurements</b>	<p>They use their senses to observe the world around them</p> <p>They measure by comparison or non-standard measures using counting.</p>	<p><b>Observing closely, using simple equipment</b></p> <ul style="list-style-type: none"> <li>They explore the world around them. They make careful observations to support identification, comparison and noticing change. They use appropriate senses, aided by equipment such as magnifying glasses or pocket microscopes to make their observations.</li> <li>They begin to take measurements initially by comparison, then using non-standard and beginning to use standard measures. Put a number on it to compare.</li> <li>They plan what they will observe and how they will measure.</li> </ul>	<p><b>Making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers</b></p> <ul style="list-style-type: none"> <li>They make systematic and careful observations</li> <li>They use a range of equipment for measuring length, time, temperature and capacity.</li> <li>They use standard units for their measurements</li> <li>They help to make decisions about what observations to make, how long to make them for and the type of simple equipment that might be used</li> </ul>	<p><b>Taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate</b></p> <ul style="list-style-type: none"> <li>They select measuring equipment to give the most precise results e.g. ruler, tape measure or trundle wheel, force meter and decide the degree of accuracy/scale</li> <li>During an enquiry they make decisions e.g. whether they need to take repeat readings (fair testing); increase the sample size (pattern seeking); adjust the observation period and frequency (observing over time); or check further secondary sources (researching); in order to get accurate data (closer to the true value)</li> </ul>
<b>4 Practical enquiry</b> Classify Compare simple fair tests observations over time pattern seeking	They are confident to find the resources they need to answer a question and look carefully/use their senses to describe what they see/hear/feel	<p><b>Perform simple tests</b></p> <ul style="list-style-type: none"> <li>They use practical resources provided to gather evidence to answer questions generated by themselves or the teacher. They carry out tests <b>to classify, comparative tests, pattern seeking enquiries and make observations over time</b></li> <li>Begin to recognise when a test is not fair</li> </ul> <p>Note A <b>comparative test</b> is performed by changing a variable that is qualitative e.g. the type of material or shape of the parachute, this leads to a ranked outcome</p>	<p><b>Setting up simple practical enquiries, comparative and fair tests</b></p> <ul style="list-style-type: none"> <li>They select from a range of practical resources to gather evidence to answer questions generated by themselves or the teacher.</li> <li>They follow their plan to carry out: observations and tests to classify, comparative and <b>simple fair tests</b>; observations over time and pattern seeking</li> </ul> <p>Note A <b>fair test</b> is performed by changing a variable that is quantitative e.g. the thickness of the material or the area of the canopy. This leads to establishing a causative relationship.</p>	<p><b>Planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary</b></p> <ul style="list-style-type: none"> <li>The children select from a range of practical resources to gather evidence to answer their questions.</li> <li>They carry out fair tests recognising and <b>controlling variables</b>. They decide what observations or measurements to make over time and for how long. They look for patterns and relationships using a suitable sample.</li> </ul>
